Monolith — Receipt, session notification, detention Deck & desk clock

Faithful renders drawn from the Compose source at phone scale (390×844, 1dp = 1px). Copy, type sizes, tracking, colours and spacing are the code's own; dynamic values are realistic instances of the types the code prints. Nothing has been redesigned.

1 · The Receipt — session end, clean elapsed finish. Source: ui/components/ReceiptSheet.kt; data/ReceiptState.kt (№ format, outcome words via MonolithRepository.receiptOutcomeWord); ui/theme/Color.kt + Type.kt (light scheme: surfaceBright #FAF6F0, onBackground #2C2A29, onSurfaceVariant #5F5856). Title = the session's intention; mono lines 11sp Anonymous Pro tracked 1sp; footer 9sp tracked 0.25sp. Note: the slip prints no elapsed-duration line — ARMED/ENDED wall times and PLANNED span only.

2 · Ongoing session notification, lock screen — Source: service/MonolithShieldService.kt buildNotification() + monitor-loop updateNotification() (title "Monolith • {intention}", text "{MM:SS} left • Block {i}/{n} • {count} urges stopped"; first post reads "Monolith Locked" / "Protecting your focus session..."). Channel "Monolith Active Shield", IMPORTANCE_LOW, ongoing, onlyAlertOnce, small icon = launcher foreground. Card shape, clock and typography are Android's lock-screen rendering, not app code.

SESSION RUNNING

00:00

FLOW

BLOCK	APPS	TIME
ON	15	ENDS 19:32

BIND HELD · THIS VISIT

PROOF: LIVE BIND

SLIDE OR TAP TO START

12 WILL SHUT · 3 PEEK

3 · Detention — the Deck's frozen last frame — while a finish detains (ReceiptState.Detention: receipt issues 1480–1800ms after session end) the Deck holds the session's last frame: frozen readout, wheel composed as a still ghost, slide seated at its 72dp address, utilities row absent. Source: ui/screens/TactileDeckScreen.kt (heldFinish, hero ghosts, strip/imprint wiring); ui/components/MonolithCustomComponents.kt (ProofStripBand, ImprintSlot, seamMarksFor); ui/views/BlockitCoreViews.kt (RotaryWheelView, SlideToStartView); night tokens from ui/theme/Color.kt.

4 · Always-on desk clock — Source: ui/components/AirlockAndDisarmOverlays.kt AlwaysOnDeskClockOverlay. True-black ground (OLED pixels off), 24dp padding, 18dp gaps; eyebrow Atkinson Bold 11sp in NightColorPrimary #FFE4CF at 60%; time Anonymous Pro Bold 96sp tracked -3sp in #FFE4CF (the code's 96sp governs — its own comment says 112sp); 16dp progress bar, recess #100E0C fill in cream #FFE4CF; task banner on #362C27, Atkinson Bold 14sp. Column drifts ±6dp in 3dp steps for burn-in.
